

Where Do I Live?

Activity

Have the students draw, or make in a computer drawing program like Kid Pix, a picture of the sea including a rock shelf, an under water section and a cliff. The students can then choose 10 organisms, or alternatively use [Life Above and Below the Waves](#). They cut and paste or draw these creatures where they think they might live on the reef.

Variations

- Name and label creatures
- Give reasons why they selected the particular site.
- Label the tidal zones
- This activity could be used as an evaluation tool.

Administer it prior to the commencement of the unit and at its conclusion.
