

## Little Pied Cormorant

*Microcarbo melanoleucos*

*On the beach*

*All year round*

The **Little Pied Cormorant** is a small cormorant with white underparts and a black crown, neck and back. The bill is yellow and this bird has a white eyebrow that extends to the beak. These cormorants can form large flocks or they may be seen singly.

**Beak-to-tail:** 55 – 65 cm

*On the beach*

*In the estuary*

*All year round*

## Great Cormorant

*Phalacrocorax carbo*

The **Great Cormorant** is mainly black, but has a yellow throat patch and facial skin. It is seen singly or in small groups. This cormorant inhabits freshwater wetlands or bays and estuaries.

**Beak-to-tail:** 75 – 90 cm
